Build Your Own Gaming Computer: save money building your own high performing gaming PC or make money selling them K A Rahaman

Have you ever wished you could build your very own gaming computer at a cheap price? Gaming computers sold by manufacturers like Alienware, Gateway or Dell will cost a lot more money, anywhere from $2000 to $4000.

In this book I will show you how to build your own gaming computer for under $999 - without compromising the quality of hardware and gaming performance.

So what is the benefits to build your own gaming computer.

The main benefit you can save thousands of dollar to get your gaming computer.

Those are the story of personal benefit. But, you can take it as a profession beyond personal. You can build a high performing gaming computer under $ 999 and sell them for $2000 easily. That means total $1000 profit. If you sell 10 computers a month, you can earn over $10,000 a month. That’s not bad. This way you can start your own business.

The other benefit to building your own gaming computer is that you learn a new skill. When you select components in a computer, and go through the pain of trial and error in getting it to work, you will naturally pick up valuable computer skills. These skills will last you a lifetime and help you in all aspects of your life.

To get high-performance gaming Computer building your own PC is the best way.

I will show you, step-by-step and with full picture illustrations, how to install and configure every component in your new gaming rig.

I will give you the best practices in setting up your computer so you don't have to make the mistakes I made when I first learnt to build my own PC (believe me, there are MANY areas where you can trip up).

I know how hard trying to build your own computer can be. As a newbie to the world of computer building you have to learn how to select the best components, pick up various new technical terms like PCI Express, SATA and RAID, and also grapple with installing and configuring the hardware.

The book aims to solve all these problems. I will show you how to select each and every component for new gaming computer. I will recommend the latest components to be used and where you can buy them.

Selecting and buying the best components for your gaming rig is THE most important part of the computer building process.

Select the wrong CPU, motherboard, video card or some other component and you'll build a system that works but does not deliver the gaming performance you need.

Do yourself a favor and read How To Build A Gaming Computer For Under $999.

Save time on finding the correct components because every component you need is already painstakingly researched and spelt out.

Get the latest components you need - you won't get some outdated list of computer hardware you neither want nor need. We’re talking about top-notch components like the latest Intel processor, gigabytes of RAM and a powerful video card running on a huge, gorgeous flat-panel monitor – with the total cost below $1000.

Extract the best value out of your computer building budget by limiting the cost of the whole system to under $1000 - it is extremely hard to find a good "off-the-shelf" gaming computer at this price.

Obtain all the components you need for building that gaming computer - and I mean ALL the components. We're talking about the CPU, RAM, motherboard, video card, hard drive, optical drive, computer case, monitor, sound card, keyboard and mouse - the whole works. Not some partial list of hardware. This is a list of EVERYTHING you need - all for under $1000.

Buy ONLY the components you need to build an exceptional gaming computer - but nothing more so that you don't spend unnecessarily on unwanted components.

The best places to buy those components so you can take advantage of special deals and discounts. Don't end up paying more than you have to for a particular component.

Select the best components so you can optimize 3D gaming performance - there is a world of difference between building a GAMING computer and a normal run-of-the-mill computer.
