Materials Science and Engineering: Chapter 10. Materials Selection for Engineering Design Michael Ashby, Elizabeth Cope, David Cebon

This chapter describes a systematic methodology for optimized materials selection and informatics to support it. The starting point is a set of technical requirements for component or subsystem. These are translated into a set of limits or target values for material properties or property combinations (“material indices”). It is then possible – given a comprehensive database of appropriate materials and their properties – to screen materials against these criteria, rank the remaining materials by their ability to maximize a target value of one or more indices, and finally draw in other associated documentation to make an optimally informed decision. The reasoning is made transparent by displaying the steps and the materials that pass and fail the screening steps on material property charts that present materials on axes of their properties or of the material indices. The full decision-making history can be captured and stored for traceability and future reference. We give examples of selecting materials to minimize the mass and cost for ties, panels, and beams. The method applies equally when the design objective is to minimize environmental impact or other criteria. Beyond this, the methodology can drive development of new materials that fill “holes” in property space. The chapter concludes with an example focusing on new lightweight hybrid materials.

From reader reviews:

Stefanie Roach:

Do you have favorite book? If you have, what is your favorite's book? Publication is very important thing for us to find out everything in the world. Each guide has different aim or maybe goal; it means that reserve has different type. Some people truly feel enjoy to spend their time for you to read a book. They can be reading whatever they consider because their hobby is definitely reading a book. Consider the person who don't like studying a book? Sometime, man or woman feel need book after they found difficult problem or exercise. Well, probably you'll have this Materials Science and Engineering: Chapter 10. Materials Selection for Engineering Design.

Rose Nguyen:

What do you regarding book? It is not important along? Or just adding material when you want something to explain what the ones you have problem? How about your spare time? Or are you busy man? If you don't have spare time to accomplish others business, it is make one feel bored faster. And you have extra time? What did you do? All people has many questions above. They should answer that question mainly because just their can do in which. It said that about reserve. Book is familiar in each person. Yes, it is proper. Because start from on pre-school until university need this kind of Materials Science and Engineering: Chapter 10. Materials Selection for Engineering Design to read.

Jennifer Vickery:

What is your hobby? Have you heard that question when you got pupils? We believe that that problem was given by teacher for their students. Many kinds of hobby, Every person has different hobby. And you know that little person similar to reading or as reading become their hobby. You have to know that reading is very important along with book as to be the thing. Book is important thing to increase you knowledge, except your own personal teacher or lecturer. You get good news or update regarding something by book. Numerous books that can you choose to use be your object. One of them is niagra Materials Science and Engineering: Chapter 10. Materials Selection for Engineering Design.

Morgan Lytle:

Reading a guide make you to get more knowledge as a result. You can take knowledge and information from your book. Book is prepared or printed or highlighted from each source that filled update of news. In this modern era like currently, many ways to get information are available for an individual. From media social like newspaper, magazines, science book, encyclopedia, reference book, story and comic. You can add your understanding by that book. Do you want to spend your spare time to spread out your book? Or just trying to find the Materials Science and Engineering: Chapter 10. Materials Selection for Engineering Design when you required it?
