Tectonic Geomorphology

Douglas W. Burbank, Robert S. Anderson

Tectonic Geomorphology Douglas W. Burbank, Robert S. Anderson
Tectonic geomorphology is the study of the interplay between tectonic and surface processes that shape the landscape in regions of active deformation and at time scales ranging from days to millions of years. Over the past decade, recent advances in the quantification of both rates and the physical basis of tectonic and surface processes have underpinned an explosion of new research in the field of tectonic geomorphology. Modern tectonic geomorphology is an exceptionally integrative field that utilizes techniques and data derived from studies of geomorphology, seismology, geochronology, structure, geodesy, stratigraphy, meteorology and Quaternary science. While integrating new insights and highlighting controversies from the ten years of research since the 1st edition, this 2nd edition of *Tectonic Geomorphology* reviews the fundamentals of the subject, including the nature of faulting and folding, the creation and use of geomorphic markers for tracing deformation, chronological techniques that are used to date events and quantify rates, geodetic techniques for defining recent deformation, and paleoseismologic approaches to calibrate past deformation.

Overall, this book focuses on the current understanding of the dynamic interplay between surface processes and active tectonics. As it ranges from the timescales of individual earthquakes to the growth and decay of mountain belts, this book provides a timely synthesis of modern research for upper-level undergraduate and graduate earth science students and for practicing geologists.

From reader reviews:

Sonja Johnson:

As people who live in the particular modest era should be update about what going on or data even knowledge to make these keep up with the era which is always change and move forward. Some of you maybe will update themselves by studying books. It is a good choice in your case but the problems coming to a person is you don't know what one you should start with. This Tectonic Geomorphology is our recommendation to help you keep up with the world. Why, because this book serves what you want and need in this era.

James Benavidez:

The e-book with title Tectonic Geomorphology has lot of information that you can understand it. You can get a lot of advantage after read this book. That book exist new knowledge the information that exist in this guide represented the condition of the world now. That is important to yo7u to be aware of how the improvement of the world. This specific book will bring you within new era of the syndication. You can read the e-book on your own smart phone, so you can read that anywhere you want.

Helen Massey:

In this time globalization it is important to someone to acquire information. The information will make someone to understand the condition of the world. The health of the world makes the information much easier to share. You can find a lot of recommendations to get information example: internet, newspapers, book, and soon. You can see that now, a lot of publisher which print many kinds of book. The actual book that recommended for you is Tectonic Geomorphology this publication consist a lot of the information on the condition of this world now. That book was represented so why is the world has grown up. The vocabulary styles that writer use to explain it is easy to understand. The actual writer made some research when he makes this book. Honestly, that is why this book appropriate all of you.

Erika Yoon:

Is it a person who having spare time after that spend it whole day simply by watching television programs or just telling lies on the bed? Do you need something totally new? This Tectonic Geomorphology can be the respond to, oh how comes? A book you know. You are and so out of date, spending your spare time by reading in this new era is common not a nerd activity. So what these books have than the others?
